VERSION 1

UKT-40 Full Height Turnstile

The UKT-40 is a single slimline full-height turnstile. We can have our UKT-40 range delivered to site flat packed or preassembled, allowing for a rapid installation time on to a flat level base.

Our units come with a 120° three rota position configuration (4 rota 90° also available). This wider design allows users to enter carrying small items like backpacks while still providing a high level of secure access.

Optional canopy heads can be fitted directly above the walkways, alongside optional access control reader mounting plates to cater for all types of third-party systems.

You can use the turnstile mechanically or powered, making this product suitable for a wide range of environments. In the event of a fire alarm the units can be configured to freely rotate.

Multiple finishes available, including powder coated only (for internal use), galvanized only, galvanized & powder coated, stainless steel 304 & stainless steel 316.

KEY PRODUCT FEATURES:
